What we do

Project cargo(es) to remote and uncharted territories— where little or no roads or infrastructure exists… this calls for a creative approach, practical co-operation with local authorities & business partners, in an ethical, safe, an timely manner. That is our mission.

This is where we thrive: efficient, cost-conscious, and total service — not only the big stuff, but up to and including the smallest package, assistance with local partners or authorities.

Enabling, so every stage of the project reaches completion as planned.

Key to a good project execution is preparation: check if all eventualities are considered, and adequate measures are in place.

Where-ever your next project will be, we are ready to investigate the constraints & possibilities at location — providing functional solutions through solid preparation.

In the field, we use our own (purpose built) app, and state-of-the-art equipment (rugged PC, sat-phone, etc.)

We will go where no-one has gone before!

We go where others hesitate

A project in a remote place in New Caledonia? In the Andes mountains, the desert? Our 30+ years experience in projects will be used to your advantage: 6 Sigma, chartering, customs, heavy lift, Supply Chain Management, QHSE - we will take care of the road survey: determine the best & safest trajectory / port(s), the required engineering, lifting and transport means, customs formalities , storage, local partners, and set up the on-site delivery process.
For all parcel sizes!

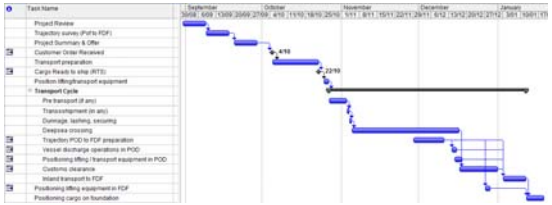
+32 (0)475 449849

GT&T can offer a vast experience, having participated in projects in New Caledonia, Algeria, Bulgaria, Madagascar, Brazil, Peru, etc. We can:

- Charter vessels to bring your project cargo from manufacturing site to build site at destination - and arrange everything in between.
- Deal with inadequate roads, heavy cargoes (max so far = 3000 mTons), customs formalities, even employee or worker evacuation through close co-operation with local authorities and consulates.
- Track your cargo daily, all the way - for as long as it is on our hands - even when it is sailing!

We will monitor ship arrival dates, to enable smooth port operations and onward transport to the building site.

If so required, we will co-operate with your in-house logistics dept. - consulting, complementing, to achieve optimal results.



Whatever the challenge is, call us - we will actively work with you to find a suitable work method for all involved - seeing a project finalised as planned is the best possible satisfaction - having been part of the solution!

We have directly or indirectly worked with:
